2 complementary slide agglutination tests for the rapid qualitative or semi-quantitative detection of IgM RHEUMATOID FACTOR in serum.

- **Easy reading: bi-colored reactions**
- Complete kits (controls included)
- Simple and fast protocol (2 minutes)
- Cost effective test
- Long shelf life
**SEROLOGY RAPID TESTS**

**ELITex Bicolor RF - WAALER-ROSE Bicolor**

**PRINCIPLE:**

Latex particles (ELITex Bicolor RF) or Red Blood Cells (WAALER-ROSE Bicolor) are sensitized by gamma-globulins (Human IgG for ELITex Bicolor RF / Animal IgG fraction for WAALER-ROSE Bicolor) and added to the tested serum. If Rheumatoid Factor is present in the serum, it will agglutinate and be revealed by an easy-to-read bi-colored reaction.

**METHODOLOGY:**

1. Add Serum or Control(s) = 10 µL for RF, 25 µL for WR
2. Add one drop of Test Reagent
3. Slow rotary motion

**SIMPLE AND FAST**

POSITIVE REACTION:

**ELITex Bicolor RF:**
Red agglutinates on a blue background

**WAALER-ROSE Bicolor:**
Brown agglutinates on a blue background

**INTERPRETATION:**
Presence of Rheumatoid Factor

NEGATIVE REACTION:

**ELITex Bicolor RF:**
Homogeneous purple suspension

**WAALER-ROSE Bicolor:**
Homogeneous green-brown suspension

**INTERPRETATION:**
Absence of Rheumatoid Factor

**PRODUCT RANGE:**

<table>
<thead>
<tr>
<th>REF.</th>
